

Activity-2 :-
Applying the object oriented systems development life cycle.

developing a smart library management system

1. Requirement Analysis:-

Objective:-

- understand the needs of the college library
- Gather requirements from librarians, students & administrators.

Activities:-

study the existing library system & collect user requirements

Identify functional requirement & non functional requirements.

Deliverables:-

software requirement specifications (SRS)

- Feasibility report
- Requirement document.

(2) object oriented Analysis:-

Objectives:-

model real world entities within the college library domain

understand relationships and business logic without technical constraints.

(3) OOD (Object oriented design)

(1) Objective: Design the structure and architecture of the system.

(2) Activities: Design database and user interface and define class relationships and methods.

(3) Deliverables:-

Design document, Database design
UI design, Detailed class diagram.

(4) Implementation

Objective: Convert the design into working software.

Activities:- write, code create database, integrate modules.

Deliverables:- Source code, executable application database.

(5) Deployment:

Objective: Install the software in the college library.

Activities:- Install the software, configure database, train users.

Deliverables: Installed software, user manual training guide.

(6) Expected Learning Outcomes:

Understand OS/SDLS phases

Know object-oriented concepts in deployment

Understand importance of UML diagrams in analysis, design and implementation
