

Activity-3

selecting an appropriate object oriented methodology

1) compare 2 object-oriented methodologies

RUP: structured, document-based, suitable for large projects.

agile: Flexible, iterative, suitable for changing requirements.

(2) Best methodology and justification

- ⇒ agile methodology
- ⇒ supports frequent requirement changes
- ⇒ Delivers software in small iterations
- ⇒ Encourages regular customer feedback

- (3)
- ⇒ Identify system classes.
 - ⇒ shows relationship between objects
 - ⇒ improves system understanding
 - ⇒ simplifies design and development

(4) Possible classes and relationships

classes: user, vehicle, parking slot, Ticket, payment

Relationships:

- ⇒ User own vehicle
- ⇒ vehicle uses parking slot
- ⇒ vehicle requires ticket
- ⇒ Ticket includes payment

(5)

How the methodology supports requirement changes -

- ⇒ Uses short development cycles.
- ⇒ Allows easy feature update
- ⇒ Accepts continuous customer feedback
- ⇒ Improves software step by step.
