

Activity-5 Object Oriented Development for an E-learning Platform

(1) Agile and object-oriented development work together by:

- ⇒ Developing software in short sprints
- ⇒ creating reusable classes & objects
- ⇒ Continuous testing & integration
- ⇒ Frequent customer feedback
- ⇒ Refactoring classes whenever needed.
- ⇒ Delivering working software after each sprint.

(2) Divide the project into suitable agile iterations (sprints)

sprint	Features.
sprint-1	User Registration, Login, User Profile
sprint-2	Online classes & course management.
sprint-3	Assignment & Quiz module.
sprint-4	Discussion Forum & Progress Tracking

(3) object/classes

- ⇒ student
- ⇒ Teacher
- ⇒ course
- ⇒ Quiz
- ⇒ Assignment
- ⇒ Forum
- ⇒ Progress.

Relationships:-

- ⇒ student enrolls in course
- ⇒ Teacher teaches course.
- ⇒ course contains quiz & assignment
- ⇒ student submits assignment
- ⇒ student participates in forum.
- ⇒ Progress tracks student's performance.

(4) continuous feedback:

Detects defects early

Improves user satisfaction.

Helps prioritize important features.

Reduces development risk.

Improves software quality through regular testing.

Supports continuous improvement.

(5) sprint Plan

week	Activities	Deliverables.
week 1	Requirement gathering UML design, user Registration	Login & Register module.
week 2	course management, online classes	course module.
week 3	Quiz & assignment Development	Quiz & assignment module
week 4	Discussion Forum, Progress tracking Testing	working Prototype Forum & Progress Report
